RESUME:

Education: Bachelor of Science, Marine Biology, University of Rhode Island, 08/23/2002.

Goals: To earn a Ph.D. in the field of Evolution Biology, and to write the book that I envisioned, circa 2000-2002, expressing my novel theories regarding the subjects, as listed, below (and as described, in detail, on my website ladnarofladner.github.io/OldResume.html).

Original Hypotheses and Theory:

I. Meyer's Law (Meyer's Combinatorial Linguistic Law), $V(N^2) = S$, devised in October 2003, remains unpublished and untested. (See my website ladnarofladner.github.io/OldResume.html, for details.)

II. The Meyer-Hardy-Weinberg Equilibrium, devised circa 1999-2002, remains unpublished and untested.

III. Meyer's Optical Approximation of Anthropoid Human Eyes (MOAAHE), devised circa 2006-2012, remains unpublished and untested.

IV. Meyer's Standard Strong Artificial Intelligence Directories (MSSAID, circa October 2020 and Present), devised circa 2016-2020, and, to present; remains unpublished and untested.

V. Olfactory, Gustatory, SAWs and FOICs (2020-Present: 2030 expected completion.);, devised circa 2020-2026, and, to present; remains unpublished and untested. (See ladnarofladner.github.io/OlfactoryResearch.html for details.)

Work Experience: For full work experience, see ladnarofladner.github.io/OldResume.html . Relevant scientific or technical positions are summarized, below.

1. Studied abroad at the Bermuda Biological Station for Research. General collection, taxonomy, and systematics of tropical marine invertebrates, with a focus on Tardigrada. 2001.

2. Founded Sams Antics Inc., in the State of Rhode Island, a corporation for testing Meyer's Linguistic Law, namely, $V(N^2) = S$, as devised, October, 2003.

3. Cabot Creamery, Quality Control. Circa 2005, I studied VLSI design (Weste and Eshraghian), hardware and logic design (Wakerly), & "Scientific Charge Coupled Devices" i.e. imagers, (Janesick).

4. IBM, Rapid Thermal Anneal Technician. Studied Kingslake, "Lens Design Fundamentals", and general optics (Hecht) in my off hours. 2006

5. Numerous robotic eye designs (consult ladnarofladner.github.io/VisionResearch.html) .

6. Hobbyist study of 6502 systems, chip hardware architecture, assembly language, newer raspberry pi cluster computers, transducer integration, some python programming, some bash scripting, and some TI-82 BASIC programming.

7. Moved to Canada, and conceived of a plan for expansion to the standard Linux operating system directory tree (LSB; FHS), and posted, on-line, a plan for MSSAID (Meyer's Standard Strong Artificial Intelligence Directories). See ladnarofladner.github.io/OldResume.html for lengthy descriptions of the ideas listed above.
